

The UK Pavilion

Bauma

19-25 April 2010

The CEA and UK Pavilion at Bauma 2010

The UK Construction Equipment Association (the CEA) is again organising the UK Pavilion at Bauma 2010, with support from the UK Government. The UK Pavilion, located in Hall A5, comprises over 30 UK manufacturers. Many of these companies are launching innovative new products at Bauma – showcasing the best of British manufacturing.

The UK has a proud history of engineering excellence and innovation and nowhere is that more evident than in the construction equipment industry. Companies continue to make huge investments in research and development; designing and producing machines that are ever more powerful, clean, safe and technologically advanced.

The UK construction equipment industry is worth over £8 billion a year to the British economy and its influence can be seen in virtually every country in the world. Such a powerful industry demands a powerful voice. With over 120 member organisations – including original manufacturers and suppliers – the Construction Equipment Association (CEA) represents some of the world's biggest UK-based names.

We support our members' interests by promoting their world-class research and development, manufacturing skills and cutting-edge products, all of which play a vital role in shaping our world.

The CEA also helps influence legislation and EU and global regulation. One of the ways we do this is by being an active member of the EU's Committee for European Construction Equipment, as well as the lead organisation in CESAR, a hugely successful plant security scheme.

The UK Pavilion is a great example of our thriving industry and demonstrates why the UK is such an attractive base for so many companies. We thank you for taking the time to discover more about our sector from the following UK Pavilion company information.

A handwritten signature in black ink, appearing to read 'Joanna Oliver', is written over a light grey rectangular background.

Joanna Oliver, CEA Director of Global Programmes

The UK Group at Bauma – Supported by UK Trade & Investment

The UK Group at Bauma 2010 is supported by UK Trade & Investment. UK Trade & Investment (UKTI) is the Government organisation that helps UK-based companies succeed in an increasingly global economy.

UKTI are sponsoring a series of Meet the Buyer Events at Bauma 2010 – bringing in buyers from target markets around the world to meet world class UK manufacturers exhibiting at Bauma. UKTI will also sponsor a VIP Networking Reception during Bauma – press invitations will be issued to interested parties.

The UKTI range of expert services are tailored to the needs of individual businesses to maximise their international success. Companies are given advice and practical support.

UK Trade & Investment also helps overseas companies bring high quality investment to the UK's economy – acknowledged as Europe's best place from which to succeed in global business.

UKTI provide support and advice to investors at all stages of their business decision-making. UK Trade & Investment offers expertise and contacts through a network of international specialists throughout the UK, and in British Embassies and other diplomatic posts around the world. Staff can assist at all stages of the business planning cycle, from inception to completion.

A message from Lord Mandelson - First Secretary of State, Secretary of State for Business, Innovation & Skills, Lord President of the Council

The Construction Equipment Industry in the UK is an important element of this country's engineering capability and is a cornerstone of the UK manufacturing base.

Manufacturing matters. As we clearly outlined in the Government Strategy produced in September 2008, *Manufacturing: New Challenges, New Opportunities*, manufacturing is recognised as critical to the success of the UK economy. Over one third of the earthmoving equipment made in Europe comes from the UK, with the sector exporting over 70 per cent of its UK production.

Not only is this an extensive range of finished equipment – but we also have countless component and accessory suppliers and specialist service providers. This is a position of which we should rightly be proud. Companies in the UK have many great strengths which have helped them drive forward key developments in equipment and product design and technical innovation, so there is no doubt we have the skills and capabilities to continue to succeed in the global market place.

What we must ensure is that we get this message out to our potential customers across the world. Working with industry and the Construction Equipment Association (CEA), UK Trade & Investment (UKTI) will continue to play a key role in ensuring the very best of what the UK has to offer is available to those who wish to use UK equipment, components and services.

Both BIS and UKTI have a long history of engagement with and support for the sector in the UK and working with the CEA. I am therefore delighted that BIS is able to support the CEA and its ongoing mission to showcase the wide range of high quality innovative products, technological developments and expertise the UK construction equipment industry can offer.

A handwritten signature in blue ink, which appears to read 'John Mandelson', is written over a vertical line.

The Rt Hon Lord Mandelson
First Secretary of State, Secretary of State for Business, Innovation & Skills,
Lord President of the Council

Company: **Ashtree Glass Ltd**

Contact: John Roper

Email: john@ashtreeglass.co.uk
sales@ashtreeglass.co.uk

Website: www.ashtree.yorks.com

Telephone: +44 (0)1274 546732 or 07932 627674

Product(s) to be Exhibited at Bauma: Rear view mirrors, safety mirrors, mirror arms and mounting brackets.

New Products launched at Bauma: A new range of safety mirrors and mirror arms. A patented mirror arm suitable for cab mounting that provides better positioning options and is more resistant to vibration than most models currently available.

Ashtree Glass has a range of safety mirrors suitable for use in helping meet the requirements of the latest European visibility directives.

Industry Sector(s) Targeted: Cab builders, vehicle and equipment manufacturers.

Target Regions/Countries: European and worldwide

Company Name: **Amber Valley Developments Ltd**

Contact Name: Elaine Vandelli

Email: sales@amber-valley.co.uk
for press enquiries elaine@hi2events.co.uk

Product(s) to be Exhibited at Bauma: Reverse Alarms, Warning alarms for various operating procedures for construction and other commercial vehicles. Camera Systems, Bespoke Automotive Accessories for OE manufacturers. Voltage converters.

New Products launched at Bauma: Siteminder - Tracked Vehicle Alarm
Specifically designed for tracked vehicles with 360 degree rotating cabs where it is impossible to know if the vehicle is going forwards or backwards.

Extensive research into this problem with the co-operation of Original Equipment Manufacturers, construction equipment dealers and repair specialists led up to develop the AVMA95 & AVMA98 Siteminder systems.

AVMA95 – Motion alarm with intermittent tone warning
AVMA98 – Motion alarm with spoken message warning (available in any language)

Highlight any unique/ high tech/ advanced manufacturing techniques/ processes used by your company: As a manufacturer we are able to design and build to any specific requirements of Original Equipment manufacturers.

(continued over ...)

Amber Valley Developments Ltd

News: Amber Valley Developments are now the biggest European Manufacturer of reversing safety and vehicle battery and engine protection products, and in fact are actively pioneering new products for launch in the next 12 Months.

From our manufacturing base in Leicestershire, UK, we are introducing a new research and development facility, together with a new circuit board and harness production lines, designed to give us the capability to compete successfully.

Industry Sector(s) Targeted: Commercial Vehicle Manufacturers.
Distributors of Automotive Electrical and Safety Equipment.

Target Regions / Countries: Germany, France

Company Name: **Brendon Powerwashers**

Contact Name: Chris Hendy

Email: chris@powerwashers.co.uk

Website: www.powerwashers.co.uk

Telephone: +44 (0) 1984 624500

Product(s) to be Exhibited at Bauma: Brendon range of diesel, petrol and electric powered high pressure washers -trailer and skid mounted, mobile and portable versions

New Products launched at Bauma: New and being exhibited for the first time will be the Brendon HWBBW50Kpi, one of 4 all new HOT water, high pressure, fully autonomous Bowser Washers available in trailer and skid mounted versions.

Highlight any unique/ high tech/advanced manufacturing techniques/ processes used by your company: Brendon's new hot water bowser washers uses a patented diesel fired water plate heat exchanger with minimum moving parts for heating the water to 78°C. The 24 volt heater module has been designed for speedy removal within 3 minutes for maintenance and servicing.

Industry Sector(s) Targeted: Construction, mining, public utilities, local authorities, marine and industrial cleaning sectors

Target Regions/Countries: Worldwide

Company: **CDE Global**

Contact Name: Peter Craven

Email: info@cdeglobal.com

Website: www.cdeglobal.com

Telephone: +44 (0)28 8676 7900

New Products launched at Bauma: M2500 mobile screening and washing plant

Highlight any unique/high tech/ advanced manufacturing techniques/ processes used by your company:

The M2500 is a revolution in mobile washing plant as the first ever mobile plant specifically designed for washing applications. Whereas previous mobile washing systems have been adaptations of dry screening systems – essentially with a few spray bars added – the M2500 has been specifically designed as a mobile washing plant which enables the production of up to 4 washed aggregates and 2 washed sand products. The M2500 allows for the setting up of a compact, mobile washing plant which meets the requirements of sand and aggregate producers throughout the world. A key USP of the M2500 system is that each unit is customised to the specific requirements of the project it is intended for. The wet screening process is customised to produce the specific grading of aggregates required by the customer and the sand washing phase is conducted through an integrated Evowash system which is set up to produce sand products to the exact specification required by the customer.

Is your company involved in the production/use of any of the following (if so please specify in what capacity)?

Advanced materials: Our systems can be used for the production of specialist sand products such as USPGA specification golf sands, filter sand for use in waste water treatment applications and silica sands for use in glass production. In addition to these, our systems can be applied for the processing of lignite contaminated material to ensure the production of high specification sand and aggregate products free from lignite contamination.

CDE Global

Recycling/ environmental products:

Our systems also have application in the recycling of construction and demolition waste material. In the UK market alone plants we currently have in place are currently recycling approximately 2.5m tons of construction and demolition waste material each year and producing high quality recycled sand and aggregate products with a vast range of applications in construction projects.

In addition to this we also offer a wide range of water treatment systems for operators in the quarrying, mining and construction waste recycling sectors that reduce the consumption of fresh water used in the processing plant by up to 99%. These systems include our AquaCycle thickeners and GHt Filter Press systems which in combination offer our customers a full closed circuit water recycling system.

Company Name: **Darchem Engineering**

Contact Name: Chris Curran

Email: Chris.curran@esterline.com

Website: www.darchem.co.uk

Telephone: +44 (0)1740-632704

Product(s) to be Exhibited at Bauma: Insulation solutions for managing heat issues in construction equipment engines/exhaust systems.

Highlight any unique/high tech/advanced manufacturing techniques/processes used by your company: As well as established metallic systems, Darchem leads the market in providing a moulded composite cover which has improved fluid dispersal properties and can include manufacturer logos for an original equipment appearance.

Industry Sector(s) Targeted: Construction equipment manufacturers

Target Regions/Countries: Europe

Company: **Edge – Design and Engineering Innovation**

Contact: Darragh Cullen

Email: darragh@kmcengineering.com

Website: www.kmengineering.com

Telephone: + 44 (0) 2887 749049

New Products being introduced at Bauma: TS 80 – 80ft Track Conveyor
Edge Slayer- Twin Shaft Slow speed shredder & Edge Samurai
TL220 – Tracked Loader
Float Tec – Water Separator

Highlight any unique/high tech/Advanced manufacturing techniques/processes used by your company:

Unique patent pending interchangeable toolhead design for edge slayer and samurai shredder

Low Carbon technologies – Full consideration given in design process for reduction of noise and fuel consumption.

Recycling/environmental products: Shredder, Conveyor, Float Tec

News: Edge are a new company in the market place, utilising best of existing technology and incorporating new innovative ideas, producing new innovative products to a range of industries. We are the only manufacturer of mobile shredders in Ireland and the UK.

Targeted industry sectors: Materials Handling, Recycling, Mining, quarrying,

Targeted regions/countries: Worldwide

Company: **Fablink**

Company Name: **Nylacast Ltd**

Contact Name: Thomas Lynch

Email: thomas.lynych@nylacast.com

Website: www.nylacast.com

Telephone: +44 (0) 116 276 8558

Product(s) to be Exhibited at Bauma: Nylacast Crane Pads, Thrust Washers, Telescopic Boom Wear Pads, Hose Pulleys, Socket Liners, Bushes, Brake Link Pads, Chain Guides, Slide Block, Axle Differential Bearings, Slew Rings, Pulleys/Sheaves, Wear Strips, Articulated Bushes, Support Rollers, Gears, Outrigger Support Pads.

New Products launched at Bauma: Market Leading Engineering Polymer Solutions company Nylacast introduce a new formulation of an Eco PA6 Nylon.

Nylacast are consistently meeting the markets demands for new materials and applications and have continued their drive towards sustainable and Eco friendly technology.

As a natural product castor oil is an ideal substitute for mineral oil based caprolactram to give a unique product. Nylacast have developed our own formulation of an Eco PA6 Nylon based upon the increased use of Castor Oil whilst keeping the traditional strengths of the mineral based materials.

Highlight any unique/high tech/ advanced manufacturing techniques/processes used by your company: Nylacast Nylube Materials – Self-lubricating Glass Filled Nylube – used in extreme and arduous conditions and self-lubricating, Lean Manufacturing, Just In Time
Project Management Based Environment, Quality enhancements,
Advanced materials: Nylacast Nylube Materials, Nylacast Glass filled Nylube, Nylacast Oilon,
Low carbon technologies: Nano technology.

(continued over ...)

Nylacast Ltd

Nylacast will be exhibiting Bigfoot, the original industry approved outrigger pad, along with a range of wear pads, sheaves, pulleys, gears, rollers, bushes and many other wear parts in unique self lubricating materials.

At Nylacast we offer a very cost effective alternative to traditional engineering metals. Nylacast components are self-lubricating – eliminating routine/costly maintenance, exceptionally resistant to wear and abrasion, stable, corrosion and chemical resistant, typically 1/7th the weight of steel, 25 times more wear life than phosphor bronze, produced in high visibility colours for increased safety, and have high impact strength. Our skilled team of designers, engineers and production staff ensure expert advice is available on application requirements and materials selection. In-house technical expertise and a vast state of the art manufacturing facility mean Nylacast can design and manufacture components to suit the specialist needs of every customer.

During 2009 Nylacast have gone against the trend and expanded our Construction operations and increased our presence in support of the Construction market. Having attended a number of forums, held construction based events and increased our sector specific project teams from Quality to Business development and support, we at Nylacast believe that as the construction market grows we will be well placed to offer our customers the value they require.

On a global scale Nylacast continue to push boundaries to help our customers during challenging times. As a recognised “technology enabler” creating new applications using best effective design techniques has ultimately seen Nylacast be intuitively synchronised to our customers needs adding value across the construction supply chain.

Product(s) to be Exhibited at Bauma: Engine driven sound attenuated pumpsets for construction and mining dewatering including the market leading range of high flow and high head Pioneer Prime pumpsets.

New Products launched at Bauma:

Brand new PP100 pumpset with 2010 designed Pioneer prime 100mm pump capable of flows in excess of 200m³/hr and pressures of 3 bar whilst still being able to pass 76mm solids. The new design encompasses a brand new canopy design incorporating the new CAT 1.5ACERT Tier III engine making it one of the quietest most environmentally friendly pumps on the European market.

Brand new PP150 pumpset with 2010 designed Pioneer prime 100mm pump capable of flows in excess of 400m³/hr and pressures of 3 bar whilst still being able to pass 76mm solids. The new design encompasses a brand new canopy design incorporating the new CAT 2.2TA ACERT Tier III engine making it one of the quietest most environmentally friendly pumps on the European market.

Brand new PPX80S 4X3 high pressure engine driven pumpset powered by a four cylinder 80kw JCB 444TA Tier III engine capable of flows up to 120m³/hr and pressures in excess of 20bar used in drilling and dewatering applications where extreme pressures are required.

Newly improved PP200 JCB 444 powered high flow 200mm pumpset mounted in a fully banded sound attenuated canopy capable of 900m³/hr and pressures in excess of 5 bar making this the highest performing engine driven 200mm pumpset on the world market.

Telephone: + 44 (0) 1621 850 777

New Products launched
at Bauma:

Youngman Group introduce two new product ranges at BAUMA 2010. Youngman Group is one of the world's leading suppliers of light access equipment including aluminium and fibreglass access towers, stagings, access and work platforms, ladders, step ladders and aluminium unit beams. Always innovating and supplying the highest quality products Youngman also offer clients bespoke access solutions and via the Events Division offer a range of products including staging, a crowd control barrier system and a camera and lighting tower.

Ecolite, is a range of **environmentally friendly** lighting towers. Both the Ecolite T and P combine the latest, **energy efficient**, ceramic discharge lighting technology with patented prismatic lenses to produce high quality, flicker and glare-free light from a power unit offering **fuel savings of around 80%** compared with conventional lighting towers. Four die cast aluminium lighting heads are mounted on a 9.0m fully hydraulic mast which uses **bio-degradable** water based fluid. Dusk-to-dawn auto switching is available on both models further enhancing the **exceptional green credential of the Ecolite range.**

The Ecolite-T is a compact, braked, trailer mounted unit with a bunded roto-moulded base and in-built AMOSS (automatic mast operating safety system) which lowers the mast if the hand brake is released, thus making it impossible to tow with the mast erected.

The Ecolite-P features the same componentry, but housed in a robust 1.2m x 1.2m insulated steel housing incorporating a four-way entry pallet base. This makes the Ecolite-P ideal for events and remote locations where security is an issue.

(continued over ...)

Taylor Construction Plant Ltd.

BoSS X-Series Micro Scissor Lifts: two new X-Series push-around machines, the BoSS X2 and BoSS X3X together with the latest specification, auto-braked BoSS X3 micro scissor lift.

The two new models follow the BoSS X3 proven design concept, incorporating rigid box-section steel scissors, high-quality, heavy duty componentry with all key serviceable items housed in a pull-out compartment for easy inspection and maintenance.

The new BoSS X2 is the smallest in the range, featuring a two-section scissor and giving a 2.01m platform height. It is powered by a 12V/80Ah deep cycle sealed gel battery which takes the platform to full height in just 10 seconds.

At the top end of the range is the new BoSS X3X. Like the original X3, this machine has a three-scissor configuration, but its longer scissors enable it to reach a platform height of 3.2m without the need for additional stabilisers. This is 0.65 m higher than the X3 and makes the BoSS X3X the highest push-around scissor lift on the market.

at Bauma:

DHCR1500R, a test solution designed for testing the very largest mobile machinery with a maximum theoretical power of over 1MW

New Products launched
at Bauma:

The test kit, designed in collaboration with a major US mobile machinery manufacturer, enables the operator to measure flow, pressure and temperature while simultaneously loading the system using the purpose built pressure loading valve. The HV1500 is designed to allow the operator to simulate the machine circuit under normal conditions by restricting the flow and, hence, increasing the pump's operating pressure.

Despite the large flows and pressures involved the valve can be operated with one hand and can be used to increase the load smoothly. The valve, like all Webtec HV series load valves, features a built-in burst disc safety mechanism to prevent over-pressurisation that could otherwise damage the test kit and circuit under test. Rated to a maximum of 1500 lpm and 420 bar with code 62 two inch fittings, the DHCR1500R test kit is available to order now.
